FINGER SPACING

The practice of analysing your hand shape is called chiromancy and can reveal a lot about your personality. The wider the space between your fingers, the more open you are to showing your feelings towards sex and life.

Unfortunately, having wide spaces between your fingers is not so good for your finances as the wider the space, the more money you are likely to spend.

If you have long fingers you have an eye for detail when completing a task but if your fingers are short you like to dive in and get the job done as soon as possible.

RINGS

Rings on your fingers tell other people about your priorities in life. For example, entertainers and musicians will often have rings on their little fingers because this helps them with self-expression.

Rings on your index finger (Jupiter) relate to work and spirituality, on the middle finger (Saturn) they relate to personal goals and beliefs, on the ring finger (Apollo) they relate to creativity and money, and on your little finger (Mercury) they relate to communication, love and music. Use rings to help you improve areas in your life.

Q What do my hands say about my life? Is there any good news about my health, wealth or love life?

Carol

Your love life has been challenging over the past two years but if you clear out the "rubbish" in all areas

of your life and prepare for 2006, your year ahead looks really good. You will have some great business opportunities, so now is the time to do some finance courses to get you on track. Real estate and investments also look favourable. Your head line shows that overindulgence can play havoc with your health. You are also spiritual; do some courses in this subject too and you may just find love and happiness.
